Testing Summary

Viral Test:

There are 7 known coronaviruses (including COVID-19) that infect humans, including some that cause mild upper-respiratory tract illnesses like the common cold. COVID-19 is a novel corona virus, meaning it is a new Strain. Because it is new, there was no COVID-19 specific diagnosis code available for providers to use. New codes were approved for diagnosing confirmed COVID-19 cases beginning April 1, 2020.

COVID-19 cases beginning April 1, 2020. In the interim, the Centers for Disease Control (CDC) directed providers to use the non-specific coronavirus code B97.29 that was historically used to report on non-COVID-19 coronaviruses. The interim B97.29 code is not conclusive for a COVID-19 diagnosis. COVID-related codes have been grouped together based upon the likelihood of a positive diagnosis and are presented within this report. Reporting of COVID-19 cases may be understated for several reasons: Tocline and diagnosis may be understated due to

- Testing and diagnosis may be understated due to provider coding and billing processes.
- o Claims may be submitted with a presenting diagnosis (e.g. 'respiratory illness') and may not include any diagnosis directly related to COVID.
- Reporting is based on claim experience and does not account for members who do not seek medical care
- Claims with newer coding may be pended while reimbursement logic is updated and will not appear in this report until holds are released.
- Reporting may be understated as claims for most recent services may not have yet processed.
